	SECTION A READING – 30 Marks	
1.	<p>Read the passage given below carefully and answer the questions that follow:</p> <ol style="list-style-type: none"> 1. <i>One of the greatest sailing adventures of the past 25 years was the conquest of the Northwest Passage, powered by sail, human muscle, and determination. In 100 days, over three summers (1986-88), Canadians Jeff MacInnis and Mike Beedell accomplished the first wind-powered crossing of the Northwest Passage.</i> 2. In Jeff MacInnis's words...Our third season. We weave our way through the labyrinth of ice, and in the distance we hear an unmistakable sound. A mighty bowhead whale is nearby, and its rhythmic breaths fill us with awe. Finally we see it relaxed on the surface, its blowhole quivering like a volcanic cone, but it senses our presence and quickly sounds. We are very disappointed. We had only good intentions - to revel in its beautiful immensity and to feel its power. Mike thinks how foolish it would be for this mighty beast to put any faith in us. After all, we are members of the species that had almost sent the bowhead into extinction with our greed for whale oil and bone. It is estimated that as many as 38,000 bowheads were killed off eastern Baffin Island in the 1800s; today there are about 200 left. 3. The fascinating and sometimes terrifying wildlife keeps us entertained during our explorations. Bearded harp and ring seals greet us daily. The profusion of bird life is awesome; at times we see and smell hundreds of thousands of thick-billed murrelets clinging to their cliffside nests. Our charts show we are on the edge of a huge shoal where the frigid ocean currents upswell and mix nutrients that provide a feast for the food chain. At times these animals scare the living daylight out of us. They have a knack of sneaking up behind us and then shooting out of the water and belly flopping for maximum noise and splash. A horrendous splash coming from behind has a heart-stopping effect in polar bear country. 4. We have many encounters with the "Lords of the Arctic," but we are always cautious, observant, and ever so respectful that we are in their domain. In some regions the land is totally devoid of life, while in others 	12

	<p>the pulse of life takes our breath away. Such is the paradox of the Arctic; It's wastelands flow into oasis' that are found nowhere else on the face of the earth. Many times we find ancient signs of Inuit people who lived here, superbly attuned to the land. We feel great respect for them; this landscape is a challenge at every moment.</p> <p>5. We face a 35 mile open water passage across Prince Regent Inlet on Baffin Island that will take us to our ultimate goal - Pond Inlet on Baffin Bay. The breakers look huge from the water's edge. Leaning into the hulls, like bobsledders at the starting gate, we push as hard as we can down the gravel beach to the sea. We catch the water and keep pushing until we have plunged waist deep, then drag ourselves aboard. Immediately, we begin paddling with every ounce of effort. Inch by agonizing inch, Perception moves offshore. Sweat pours off our bodies. Ahead of us, looming gray-white through the fog, we see a massive iceberg riding the current like the ghost of a battleship. There is no wind to fill our sails and steady the boat, and the chaotic motion soon brings seasickness. Slowly the wind begins to build. Prince Regent Inlet now looks ominous with wind and waves. The frigid ocean hits us square in the face and chills us to the bone.</p> <p>6. We were on the fine edge. Everything the Arctic had taught us over the last 90 days was now being tested. We funneled all that knowledge, skill, teamwork, and spirit into this momentous crossing... If we went over in these seas we could not get the boat back up. Suddenly the wind speed plummeted to zero as quickly as it had begun... Now we were being pushed by the convulsing waves toward sheer 2,000 foot cliffs. Two paddles were our only power. Sailing past glacier capped mountains, we approached the end of our journey. At 05:08 on the morning of our hundredth day, speeding into Baffin Bay, the spray from our twin hulls makes rainbows in the sun as we complete the first sail powered voyage through the Northwest Passage.</p> <p>7. We have journeyed through these waters on their terms, moved by the wind, waves and current. The environment has always been in control of our destiny; we have only tried to respond in the best possible way. We've been awake for nearly 23 hours, but we cannot sleep. The joy and excitement are too great. Our Hobie Cat rests on the rocky beach, the wind whistling in her rigging, her bright yellow hulls radiant in the morning sunlight. She embodies the watchword for survival in the Arctic - adaptability. (838 words)</p>

<p>Q2.</p>	<p>Read the passage given below carefully and answer the questions that follow:</p> <ol style="list-style-type: none"> 1. By the time a child is six or seven she has all the essential avoidances well enough by heart to be trusted with the care of a younger child. And she also develops a number of simple techniques. She learns to weave firm square balls from palm leaves, to make pinwheels of palm leaves or frangipani blossoms, to climb a coconut tree by walking up the trunk on flexible little feet, to break open a coconut with one firm well-directed blow of a knife as long as she is tall, to play a number of group games and sing the songs which go with them, to tidy the house by picking up the litter on the stony floor, to bring water from the sea, to spread out the copra to dry and to help gather it in when rain threatens, to go to a neighboring house and bring back a lighted faggot for the chief's pipe or the cook-house fire. 2. But in the case of the little girls all these tasks are merely supplementary to the main business of baby-tending. Very small boys also have some care of the younger children, but at eight or nine years of age they are usually relieved of it. Whatever rough edges have not been smoothed off by this responsibility for 	<p>10</p>

younger children are worn off by their contact with older boys. For little boys are admitted to interesting and important activities only so long as their behavior is circumspect and helpful.

3. Where small girls are brusquely pushed aside, small boys will be patiently tolerated and they become adept at making themselves useful. The four or five little boys who all wish to assist at the important, business of helping a grown youth lasso reef eels, organize themselves into a highly efficient working team; one boy holds the bait, another holds an extra lasso, others poke eagerly about in holes in the reef looking for prey, while still another tucks the captured eels into his lavalava. The small girls, burdened with heavy babies or the care of little staggerers who are too small to adventure on the reef, discouraged by the hostility of the small boys and the scorn of the older ones, have little opportunity for learning the more adventurous forms of work and play.
4. So while the little boys first undergo the chastening effects of baby-tending and then have many opportunities to learn effective cooperation under the supervision of older boys, the girls' education is less comprehensive. They have a high standard of individual responsibility, but the community provides them with no lessons in cooperation with one another. This is particularly apparent in the activities of young people: the boys organize quickly; the girls waste hours in bickering, innocent of any technique for quick and efficient cooperation.
